

ECE 196 Final Video Brainstorming

- Title slide
 - Something like problem proposal can be used for reference:

- Keeping it simple is best, just serves as a basic introduction to our project and ourselves
- Graphic of our design
 - We had a similar thing in problem proposal (shown below), but for video we will hopefully have actual images of our project

- Walk through design, how it works, how each component fits into one another, the functionality and design of it, issues we encountered, etc.
 - Could talk about goals we set and our ability/inability to reach them
- Show example of functionality
 - Show ourselves signing a few words and those words showing up on the display as we walk through how it could be useful for those who are mute
- Explain Functionality of software and hardware
 - Neural network, training data, camera, PCB, transmission, display, etc.

Options Editing Software

Due to lack of experience, we will experiment with options and see what works best for our team.

Options include: iMovie, Windows Movie Maker, Shortcut, OpenShot

- These all seem beginner friendly and are free to use. We will experiment and see which one we have the most success with
